Introduction

This release guide provides an overview of the enhancements included in the Banner General 8.10.1 release.

Consent to capture and process personal data support

The Banner General 8.10.1 release introduces the functionality to keep record(s) of consent to process personal data from an individual, parent/guardian (if required), and a source of the consent, to help the institution verify they have consent for the person and the point of data entry into the institution.

This release includes four new pages to support this functionality and will support an institution's efforts to comply with data protection regulations.

This enhancement satisfies CR-000154189.

New forms

The following forms are new for this release.

Consent to Capture and Process Personal Data (GUACCPD) page

The GUACCPD page supports the functionality to keep record(s) of consent to process personal data from an individual, parent/guardian (if required), and a source of the consent, to help the institution verify they have consent for the person and the point of data entry into the institution.

Use the persona, source and consent codes to describe the type of data and the person's response. Examples may include a persona of `Student`, source of `Banner`, and consent value of `parent provided consent for minor`. Another example may include a persona of `Vendor`, source is `Third Party`, and consent value of `affirmative`.

Personal Data Consent Code Validation (GTVCCPD) page

The GTVCCPD page allows you to create and store the consent codes and descriptions to be used on the GUACCPR page to record consent responses.

Personal Data Persona Type Code Validation (GTVCCPP) page

The GTVCCPP page allows you to create and store the persona type codes and descriptions to be used on the GUACCPR page to record consent responses. You can use this persona type code to track the type of entry for the response from a person.

Personal Data Source Code Validation (GTVSCDE) page

The GTVSCDE page allows you to create and store the source codes and descriptions to be used on the GUACCPR page to record consent responses. You can use this source code to track the source of entry for the response from a person.

You can find more detailed information about field descriptions on these pages in the Banner Online Help. For more information on their functionality, refer to the “Consent to capture and process personal data support” section in the *Banner General User Guide*.
